EXPERIENCE

ForteBank

Middle ML/AI Engineer

Jun 2025 - Current Time

- Delivered **5M+ KZT** in monthly operational savings by accelerating foreign exchange (FX) contract verification by **50%**. Designed and deployed an **AI-driven compliance system** that extracts and verifies structured data from contracts, detects inconsistencies across multiple documents, checks for compliance with Kazakhstan's foreign exchange law, and flags sanction avoidance attempts.
- Reduced sanction verification workload by **70%** and helped capture sanction-avoidance attempts with **94%** accuracy. Introduced an **AI agent** into the compliance workflow that analyzes goods, counterparties, and offshore jurisdictions by combining **RAG** retrieval with a sanctions knowledge **graph**.
- Increased SME customer retention by **15%**. Improved and maintained **Churn** and **NBO ML models** by refining feature pipelines, implementing **drift and degradation monitoring**, enforcing robust validation workflows, and productionizing models via **MLflow deployment** and **Airflow DAGs** to ensure reliable, automated retraining and serving.
- **Owned the FX compliance multi-agent system end to end.** Initiated the project, defined architecture, planned the roadmap, mapped "as is" and "to be", deployed to production, and took responsibility for **SLAs**, monitoring, and post-launch improvements to ensure reliable operation and measurable business impact.
- Led a team of **5** developers, ensured best coding practices, made code reviews, introduced clean architecture patterns, led communication with business.

Ryte.AI

Junior Data Analyst

Oct 2023 - Dec 2024

- Reduced reporting cycle time by **60%** and enabled faster KPI tracking for executives and product teams. Built business-facing **analytical dashboards** with automated data pipelines, validated metrics, and drill-down analytics.
- Improved decision-making efficiency by **25%** and reduced downstream inconsistencies. Uncovered systemic data quality gaps through large-scale **EDA** across healthcare datasets.
- Increased successful feature rollouts and experimentation efficiency by **35%** by leading **A/B testing initiatives** with hypothesis-driven analytics and statistical significance testing (t-tests, chi-square, ANOVA).
- Reduced manual data processing effort by **45 hours per month** and increased data collection throughput by **70%** by engineering an automated medical data ingestion pipeline that eliminated manual bottlenecks.

EDUCATION

Nazarbayev University, BSc in Computer Science, Top 7% GPA

Aug 2021 - Jun 2026

PROJECTS

Identity-Preserving Face Super-Resolution for Low-Quality CCTV Recognition

- Designed and trained a modified **SwinIR transformer-based super-resolution model** for enhancing CCTV-quality facial imagery while preserving identity-specific features critical for recognition tasks.
- Achieved substantial improvements over baselines, **matching SOTA models**.

SKILLS

- **Programming Languages:** Python, SQL, Kotlin
- **AI/ML skills:** SciKitLearn, PyTorch, OpenAI SDK, NLTK, OpenCV, Excel, PostgreSQL, Airflow, A/B testing, FAISS, Fine-Tuning, Statistical Tests
- **Deployment skills:** FastAPI, Git, PostgreSQL, Docker, Docker Compose, Linux, Clean Architecture, CI/CD, Testing
